### DETAILED ACTION

This office action is in response to application 10/707,677 filed on 12/31/03.

Claims 1 – 7 are pending on this application.

#### *Allowable Subject Matter*

1. Claims 1 – 7 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to claim 1, the prior art does not teach a dual slope analog to digital converter, comprising: a first operational amplifier, an integrator; a comparator, whose positive input is coupled to the output of the integrator, a resistor coupling the output of the first operational amplifier and the first input of the integrator, and a first capacitor coupling the first input of the integrator and the negative input of the comparator, wherein a plurality of couplings are controlled by a plurality of switches, comprising: a first coupling, controlled by a first set of switches, for optionally forming a negative feedback loop for the first operational amplifier, a second coupling, controlled by a second switch, for optionally forming connection between the negative input of the comparator and the positive terminal of the first operational amplifier, and a third coupling, controlled by a third switch, optionally forming connection of feedback loop from the output of the comparator to the positive terminal of the first operational amplifier.

With respect to claim 5, the prior art does not teach a dual slope analog to digital converter, comprising: a first operational amplifier, a comparator, whose positive input is coupled to an analog ground; a first resistor, coupling a first pin an output of the first

operational amplifier, a first capacitor, coupling negative input of the comparator and the first pin and a second capacitor, coupling the first pin and a ground, wherein a plurality of couplings are controlled by a plurality of switches, comprising : a first coupling, controlled by a first set of switches, for optionally forming a operational amplifier, a second coupling, controlled by a second switch, for optionally forming connection between positive input negative feedback loop of the first terminal of the first operational amplifier and negative input terminal of the comparator, and a third coupling, controlled by a third switch, for optionally forming a negative feedback loop from the output of the comparator to the positive terminal of the first operational amplifier.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
